Linkedin: linkedin.com/in/saad-khan-sysops/

PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience transitioning from Linux/System Administration into modern DevOps practices. Strong background in Linux, cloud infrastructure, automation, and CI/CD pipelines. Experienced in Docker, Kubernetes, Ansible, Terraform, and cloud platforms (AWS). Passionate about building scalable, reliable, and automated systems.

CORE DEVOPS SKILLS

- **Cloud:** AWS
- **Containers:** Docker, Podman, Docker Compose, Kubernetes
- **Infrastructure as Code:** Terraform
- **Data Engineering & Streaming:** Apache Kafka, Apache NiFi, Apache Spark (Structured Streaming)
- **Configuration Management:** Ansible
- **CI/CD:** GitHub Actions, Jenkins
- **Search & Analytics:** Elasticsearch, Kibana
- **Automation & Scripting:** Bash, Python
- **Backend & APIs:** Flask (REST APIs, backend services)
- **Testing & QA:** Selenium (automation testing)
- **Monitoring:** Zabbix, Nagios
- **Version Control:** Git, GitHub
- **Networking:** TCP/IP, DNS, DHCP, NFS, FTP
- **Security:** IAM, SSH hardening, Firewalls, Patch Management
- **Tools:** Jira (Administrator)

PROFESSIONAL EXPERIENCE

TUMARMS — Linux System Administrator

June 2025 - august 2025 | On-site (Islamabad)

- Administered and optimized Asterisk & Vicidial VoIP systems on Ubuntu Linux, including SIP trunking, DID routing, and live call monitoring.
- Managed Linux system administration: users, permissions, SSH access, UFW/IPTables, and server hardening with Fail2Ban.
- Configured Nginx, FTP, and NFS services for internal applications and file sharing.
- Implemented SSL certificates, security best practices, and routine system patching.
- Automated backups and maintenance using Bash, Python, rsync, tar, and cron.
- Managed storage (LVM, partitions) and monitored systems via logs and Linux utilities to ensure high availability.

PRECISE TECH — System Administrator

Feb,2025-june,2025 | Remote

- Conducted QA testing (functional & UI) for ERP systems, validating business workflows, data accuracy, and release stability.
- Managed cloud and virtualized environments across AWS, VMware, Proxmox, and Hyper-V.
- Automated deployments and infrastructure workflows using Ansible, Bash, and Python.
- Implemented monitoring and incident response with Zabbix and Nagios to reduce downtime.
- Enforced security best practices including IAM, system hardening, and network protection.

EDUCATION

Bachelors in Aiops

PROJECTS

Real-Time AI Security Analytics Platform (Kafka + Spark + ELK Stack)

- Designed and implemented a real-time log processing **pipeline** using **Apache Kafka**, **NiFi**, and **Spark**
- Built scalable **data ingestion** workflows with Apache NiFi and Kafka producers/consumers
- Processed high-volume streaming data using **Apache Spark** for real-time analysis and transformation
- Integrated **Elasticsearch** and **Kibana** for fast search, visualization, and dashboard monitoring
- Developed and trained machine learning **models** for anomaly detection and threat identification
- Implemented alerting mechanisms for suspicious activities and system anomalies
- Ensured modular and scalable architecture suitable for high-throughput environments

Ansible Web Server Role Automation

- Built a role-based **Ansible** automation to install, configure, validate, and manage **Apache** web servers on Ubuntu.
- Used Jinja2 templates, handlers, variables, and idempotent playbooks following Ansible best practices.
- Automated firewall (**UFW**), systemd service management, and cleanup workflows.
- Fully documented and version-controlled on GitHub.

Kubernetes Multi-Tier Application

- Deployed a **multi-tier** application on **Kubernetes** with Frontend (**Nginx**), Backend (**Flask API**), and Database (**MySQL**).
- Implemented Services (ClusterIP, NodePort) for internal and external communication.
- Managed configuration using **ConfigMaps & Secrets**.
- Enabled scaling, health checks, and probes for production-ready workloads.

Trainer Management System (Flask + MySQL)

- Developed a full-stack **Flask** web application for managing trainer records with MySQL backend.
- Implemented **CRUD** operations, form validation, and dynamic UI using Jinja2.
- Ensured secure database connections and structured application design.
- Version-controlled using **Git**.

JIRA Automation Suite (Python)

- Developed **Python automation** using **JIRA REST API** to create tickets, add comments, and fetch issue details.
- Built a server health monitoring tool that auto-creates high-priority **JIRA** tickets on resource thresholds.
- Automated acknowledgment emails for newly created support tickets.
- Improved operational efficiency for **DevOps** and **QA** workflows.
